Recommendation and concluding remarks

Open house discussion

#### **Conclave overview**

Today, the industry expects from academia, a pool of work-ready skilled professionals who can be productive, efficient and highly engaged from day one.

However, at the same time, there exists a huge skill gap between what Industry expects from its people and the skills students possess at the time of seeking job. This alarming reality was quantified in a recent study by NASSCOM, which revealed that more than 80% of the Engineers are not suitable for employment. This has also been recognized by Govt. of India, which actively plans to address this National issue through its Skill India Mission.

In this backdrop, the Industry-Academy Conclave aims to bring all the stakeholders on a common platform to understand and deliberate on the Skill Gap issue and recommend strategic initiatives to be taken by Institutions of AKTU to help in transforming students into deployable skilled professionals that delight the Industry.
